

Index to Wrapped Up In the Shroud by Joseph Marino

Compiled by Paul C. Maloney (July 2014)

Note: There are 3 possible reasons for enclosing items in brackets in the following listing:

1. That Items (numbers) in brackets [] are there by inference—that is, the actual name may not appear on the designated page but that from the context it is obvious to whom or to what the reference is made. 2. The name never appears anywhere in the book but that the compiler has supplied it for the benefit of historians and other researchers. 3. Extended or expanded comments in brackets are made by the compiler.

Items in quotes are usually the names of books, newspapers, or journals. Occasionally, such quote-marked items refer to quotes on a page.

Occasionally, a topical word is used in the entry, but the topic may appear on a page with a different description. Users of this compilation may need to study the page to discover what the entry refers to.

Abbreviations: R in front of a page number = “References.” (Eg. “R205” = “References, p. 205). “A” in front of another alphabetic letter = “Appendix.” (Eg. “AA” = Appendix A, “AB” = “Appendix B,” etc.). If a name is also accompanied by “et al” I have not included the additional names in this compilation. The user may consult the References to look up the original article cited for the additional names who are co-authors of the article.

I have tried to introduce cross referencing where appropriate. Such cross referencing may be incomplete.
